Review of Applied Economics

Volume 7

No. 1-2

January-December 2011

Contents

Welfare Reform and the Spread of HIV Rand W. Ressler, Melissa S. Waters & R. Carter Hill	1-15
Do Bilateral Investment Treaties Deliver the Goods? Evidence from Developing Countries Mudziviri Nziramasanga, Frederick S. Inaba & Sanatan Shrey	17-37
Economic Welfare Effects of the FDA Regulation of Tobacco Products on Tobacco Growers Kelly J. Tiller, Shiferaw T. Feleke & Jane H. Starnes	39-54
The Behaviour of Disaggregated Public Expenditures and Income in Malaysia Chor-Foon Tang and Evan Lau	55-67
The Effects of Participation in High School Athletics and the National Honor Society on Future Earnings Mark P. Gius	69-80
Impact of Exchange Rate Policy on the Trade of Industrial Products in Sub-Saharan Africa from 1975 to 2007 Elie Ngongang	81-106
Volatility Spillover Effects in Emerging MENA Stock Markets Ahmed S. Abou-Zaid	107-127

REVIEW OF APPLIED ECONOMICS (RAE)

SUBMISSION GUIDELINES

1. Manuscripts for publication consideration can be mailed in duplicate or electronically (Word or PDF Format) to the editor or associate editors:

Dr. Christopher Gan
Chief Editor

Commerce Division (Economics), P.O Box 84
Lincoln University, Canterbury, New Zealand
(Fax: 64-3-325-3847 Tel: 64-3-325-2811)
e-mail: ganc1@lincoln.ac.nz

Website: <http://www.lincoln.ac.nz/story11874.html>

Dr. Minsoo Lee
Asian Development Bank

Au Yong Hue Hwa
Monash University, Australia

Authors are encouraged to send an electronic version of their manuscript in MS-WORD or PDF format to expedite the reviewing process. The electronic copy should be e-mailed to either: ganc1@lincoln.ac.nz or minsoolee@szpku.edu.cn

2. Manuscripts are accepted for review with the understanding that they have not been submitted for publication elsewhere and if accepted will not be published elsewhere in the same form, in English or in any other language, without the written consent of the publisher. Previous presentation at conferences should be disclosed. Author(s) will be notified via email upon receipt of manuscripts. The journal does not accept responsibility for damage or loss of manuscripts submitted. Submitted manuscripts that exceed 25 pages will not be considered.

3. Manuscripts should be written in English, double-spaced with one inch margins, printed on one side of A4 or letter-size white paper. All pages must be consecutively numbered. Titles and subtitles should be kept as short as possible. Avoid footnotes, endnotes, and appendices. References, tables, and figures should be printed on separate pages.

4. Include a cover page as a separate file attachment (it should not be in the same file that contains your manuscript). This separate cover page must contain the following information: (i) the title, (ii) the name(s) and institutional affiliation(s) of the author(s), (iii) mailing address(es), (iv) telephone and fax number(s), and (v) e-mail address(es). To facilitate anonymous reviews, indications of authorship should appear only on this page. Acknowledgements and information on grants received can be provided within this page.

The second page should contain the title followed by the abstract (not more than 250 words), maximum 3 key words and 3 JEL classification numbers (for example, C20, D72, and N16) and the text proper. There should be no name(s) and address(es) of the author(s) on this and the subsequent pages.

5. Figures will be reproduced photographically from originals supplied by the author. Only relevant figures and tables should be included on separate pages (should not be inserted in the text) and should be numbered consecutively in the text using Arabic numerals. Legends for figures should also be printed on separate pages. The titles and legends on tables and figures must be sufficiently descriptive so that they are understandable without reference to the text.

All wordings, graph lines and points on graphs should be sufficiently large and bold to permit reproduction when the diagram has been reduced to a size suitable for inclusion in the journal. Do not use any type of shading on computer generated illustrations.

6. Formulae should be numbered consecutively against the right-hand margin of the page throughout the manuscript as in (1), (2), (3), etc. If the derivation of formulae has been abbreviated, the full mathematical derivation should be presented on an Appendix.

References

References in the text should appear as Randall (1990) or Luzar et al. (1993). The author should make sure that there is a strict one-to-one correspondence between the names and years in the text and those included in the reference list. The references list should begin on a separate page at the end of the main text before tables, figures and appendices. References should be listed in alphabetical order by author's last name. Note that journal and book titles, either italicized or underlined, should not be abbreviated. References should appear as follows:

For a periodical

Rosen S., (1974), "Hedonic Prices and Implicit Markets: Product Differentiation in Pure Competition", *Journal of Political Economy*, 82: 34-55.

For a book

Freeman, M.A., (1979), *The Benefits of Environmental Improvement*. Washington, D.C.: Resources for the Future.

For contributions to collective works

Campbell, J.Y. and Perron, P., (1991), "Pitfalls and Opportunities: What Macroeconomists Should Know About Unit Roots," In Harris, R.I.D. (ed) 1995, *Using Cointegration Analysis in Econometric Modelling*, United Kingdom: Prentice Hall.

7. Data used in the empirical analysis should be sufficiently documented and be readily available to any researcher for purposes of replication. In the case of publicly available data sets, identification of variables used and any selection criteria for inclusion in the sample will suffice.

8. Any manuscript that does not conform to the above instructions may be returned for necessary revision before publication. Manuscripts failing to either meet the guidelines listed here, or to comply with the aims and scope of this journal, will be rejected without review. No paper will be rejected solely on the grounds of being too technical or too applied. As an applied journal targeting general readership, we ask authors to take care to motivate their work and to communicate in clarity.

9. Proofs will be sent to the author (first named author if no corresponding author is identified of multi-authored papers) and should be returned within 48 hours of receipt. Corrections should be restricted to typesetting errors; any others may be charged to the author. Any queries should be answered in full. Please note that authors are urged to check their proofs carefully before return, since the inclusion of late corrections cannot be guaranteed. Authors should submit an electronic copy of their paper with the FINAL version of the manuscript in MS-WORD or PDF Format. Always keep a backup copy of the electronic file for reference and safety.

10. Offprint charges: In comparison to other journals, contributors to RAE do not have to pay a submission fee. RAE editorial board considers a submission fee as unfair, because the author(s) has to pay it irrespective of whether the submission is accepted or not. Instead, RAE offers contributors a fairer policy. Only author(s) whose paper has been reviewed and accepted for publication in the journal would be required to pay an offprint charge of US\$75 to finance the publication costs. Payments should be in US funds by cheque payable to "Serials Publications."

11. Requests for Permissions, Reprints, and Photocopies

No part of this publication may be reproduced stored in a retrieval system or transmitted in any form or by any means or otherwise without the permission of the publisher

Disclaimer:

The Publisher and Editors cannot be held responsible for errors or any consequences arising from the use of information contained in this journal. As a scholarly journal, the ideas, assertions and opinions expressed therein are those of its contributing authors to stimulate thinking, discussion and research of RAE. Their publication in no way implies the agreement or endorsement of such views by either the editors and/or the publisher.

Review of Applied Economics is a refereed scholarly periodical, published twice a year by SERIALS PUBLICATIONS. Subscriptions and other inquiries should be directed to the Publisher, Serials Publications, 4830/24 Ansari Road, Darya Ganj, New Delhi-110 002, INDIA. Phone: 91-11-23245225 Fax No. 91-11-23272135 E-mail: serials@sify.com

A NOTE FROM THE EDITOR AND ASSOCIATE EDITORS

This issue marks the end of the editorial duties of three members of the editorial team. Chung-Sok Suh, Moon Joong Tcha and Sirimon Treepongkaruna have served RAE for the last six years. The journal thanked them for their valuable contributions to the success of the journal. At the same time the journal welcomes 6 new members to the editorial team; Michael Cameroon, Steven Lim, Kyoko Kusakabe, Alfred L. Oehlers, Anna Strutt and Evan Lau Poh Hock. The journal has also promoted Au Yong Hue Hwa to associate editor.

Seven years ago, when an editorial team was formed for RAE, submissions were low, and the outlook for the journal was not promising. But hard work, dedication and creativity have paid off. The journal has recently registered with EBSCOhost Publishing, with nation-wide access in more than 50 countries. EBSCO Publishing is engaged in aggregating premium full-text content into large research databases for libraries and universities. The journal is published annually, all editorial correspondence and submissions are done electronically and submissions have increased considerably over time.

This issue contains seven applied papers on various issues of interest to our readers. The lead article is by Ressler, Waters and Hill test whether Temporary Assistance for Needy Families (TANF) has succeeded in eliminating the adverse incentive structure existing under Aid to Families with Dependent Children (AFDC) program. Using GLS and IV estimation procedures on state data from 1993 through 2002, the authors find that the effect of TANF payments on heterosexual HIV incidence is significantly less than under AFDC.

Using data from the World Bank Development Indicators, the OECD International Direct Investment Statistics and the International Centre for Settlement of Investment Disputes, Nziramasanga, Inaba and Shrey investigate whether Bilateral Investment Treaties (BITs) increase FDI flows to developing countries and specifically whether foreign investors believe that host countries are credibly committed to their obligations under the investment treaties? Do foreign investors regard BITs as substitutes for strong institutions that protect property their rights from host country abrogation? Are foreign investors discouraged from investing in developing countries when they suspect a weakening of host country commitment to the investment treaties? The authors find that while BITs are effective in attracting investment, disputes tend to decrease future investment flow.

Tiller, Feleke and Starnes study examine the potential economic welfare implications for tobacco farms using the Equilibrium Displacement Model. Their results suggest that the Food and Drug Administration (FDA) regulation of tobacco products could induce a significant fall in domestic cigarette sales, leading to a significant loss in tobacco revenue and economic benefits. Therefore, despite the fact that tobacco growers are excluded from FDA authority in the Family Smoking Prevention and Tobacco Control Act of 2009, they are indirectly and adversely affected.

Tang and Lau attempt to re-investigate the behaviour of disaggregated public expenditures data and national income for Malaysia. This study covers the sample period of annual data from 1960 to 2007. The Bartlett-corrected trace tests proposed by Johansen (2002) were used to ascertain the presence of long run equilibrium relationship between public expenditures and national income. The results show one cointegrating vector for each specification of public expenditures. The relatively new MWALD test indicates a strong unidirectional causal effect runs from national income to public expenditures in Malaysia. While, bilateral causality evident exists merely between public expenditure on health and national income.

Gius determines the effects of two select types of high school extracurricular activities on future earnings: athletics and the National Honor Society. Utilizing data from the 1979 National Longitudinal Survey of Youth and a two-stage least squares estimation technique, the results indicate that high school athletes earn more in later years than honor society students. In fact, after controlling for academic achievement, honor society students earned no more in later years than non-honor society students. Finally, in examining the impact of participation in extra-curricular activities on future earnings, the results of suggest that participation in such activities increases earnings later in life.

Ngongang studies the potential repercussions of exchange rate policy on the trade of industrial products in Sub-Saharan African (SSA) countries. Panel data from 22 countries was used to estimate the impact of exchange rate policy on the trade of industrial products. The effects of three indicators were analysed, namely, the effective real exchange rate (ERER) changes, real exchange rate (RER) volatility, and (model-based measures of) RER misalignment. The analysis consists of estimating export equations for four manufacturing sectors (chemicals, textiles, metallurgy, and wood) and two exchange rate regimes, namely, a fixed exchange rate regime represented by the 12 countries of the CFA Franc Zone (CFZ), and a second and more flexible regime, represented by 10 countries outside the CFZ. The results suggest that exchange rate policy exerts a significantly positive impact on external trade performance through changes in the effective real exchange rate, and a negative impact through its misalignment.

Abou-Zaid investigates the international transmission of daily stock index volatility movements from U.S. and U.K. to selected MENA emerging markets: Egypt, Israel, and Turkey. Employing a multivariate GARCH in Mean technique due to Engle, the study finds that Egypt and Israel are significantly influenced by the U.S. stock market while Turkey is not. For example, the study findings generally suggest that international portfolio diversification and trading decisions in Egypt and Israel should be made in consideration of both the local and the U.S. markets' performance. Market participants should specifically pay closer attention to the local market conditions more than international ones in those two markets.

We hope that you are delighted with the content of this issue. We are committed to providing you with more stimulating and dynamic papers in future issues. We invite readers to suggest "themes" for special issues in RAE future issues. We want RAE to reflect your research interests and needs.
